Held each October, Cybersecurity Awareness Month (CSAM) is a collaborative effort between government and industry to ensure all Americans have the resources to stay safe and secure online while increasing our nation’s resilience against cyber threats. This annual initiative is led by the National Cyber Security Alliance and the Department of Homeland Security to raise awareness of the current cyber challenges we are all facing and the behaviors that we can adopt to overcome them.

ECU’s Information Security Office will be hosting Virtual CSAM Presentations throughout the entire month of October. Our presenters include, Defense Counterintelligence and Security Agency, Department of Homeland Security, North Carolina State Bureau of Investigation, Center for Internet Security, and ECU’s own Faculty and Staff.

Join us for the following Virtual CSAM Presentations!
